Ground Water Hydrology And Hydraulics

Ground-Water Hydrology and Hydraulics by David B. McWhorter and Daniel K. Sunada is an outgrowth of a course in groundwater hydrology and hydraulics taught for seniors and first-year graduate students in agricultural and chemical engineering, civil engineering, geology, and watershed science.

NPTEL :: Civil Engineering - Ground Water Hydrology

In the field of stormwater engineering, hydrology typically refers to the rate of precipitation, quantity of water, rate of surface runoff, and timing of its arrival at a point of interest. Alternatively, the term hydraulics is defined as the study of the mechanical behavior of water in physical systems (Henry M. Morris and James M. Wiggert).

Do You Know the Difference Between Hydrology and Hydraulics?

Together, hydrology and hydraulics help us understand and quantify the flow magnitude, frequency, duration, timing and variability of water flow and behavior. We apply this expertise to lakes, reservoirs, wetlands, rivers and the hyporheic zone.

A similar scenario for numerical studies was reported in Kihm et al. (2007). The water level of the streams is assumed to be linearly varying with distance. The aquifer is divided into two subregions and the continuity conditions of the hydraulic head and flux are imposed at the interface of the subregions.

Hydraulic head - The height above a datum plane (such as sea level) of the column of water that can be supported by the hydraulic pressure at a given point in a ground water system. For a well, the hydraulic head is equal to the distance between the water level in the well and the datum plane (ASCE, 1985).

Ground-Water Hydrology and Hydraulics

The terms groundwater hydrology, geohydrology, and hydrogeology are often used interchangeably. Groundwater engineering, another name for hydrogeology, is a branch of engineering which is concerned with groundwater movement and design of wells, pumps, and drains.

Hydrogeology - Wikipedia

Hydrology subdivides into surface water hydrology, groundwater hydrology (hydrogeology), and marine hydrology. Domains of hydrology include hydrometeorology, surface hydrology, hydrogeology, drainage-basin management, and water quality, where water plays the central role.
