Physics Tutorial: Motion of a Mass on a Spring

As in space if no gravity acts upon an object, its weight becomes zero. Mass is a scalar quantity. It has magnitude.

Weight is a vector quantity. It has magnitude and is directed toward the center of the Earth or other gravity well.

Mass is commonly measured in

shows the upward force ...

The force can be determined like so: $F = M A$, where F is the force, M is the mass and A is the acceleration (the gravity in case of weight). So $W = M G$, where W is the weight, M is the mass and G is the gravity. Btw, weight is in Newtons, while Mass is in kilograms. $1 \text{ N e w t o n} = 1 \text{ K g m * m / s }^2$
