A brad nailer looks and operates like a nail gun, but unlike every other nailer on the market today, it doesn't actually shoot nails. A brad "nailer" shoots brads. For those unfamiliar with what brads are, they are essentially a thin nail. Your average brad nail has a gauge of 18 and is generally only 0.0475 inches in cross-section.

A nail gun is operated using a trigger that activates the driving mechanism for the firing pin. The firing pin is pushed or released at high speed, driving the nail in to the material. A nailer can be used to drive fixings into a variety of materials taking almost all the work out of nailing, saving both time and effort on a job.

In another situation, two workers were building a wall while remodeling a house. One of the workers was killed when he was struck by a nail fired from a powder-actuated nail gun. The tool operator who fired the nail was trying to attach a piece of plywood to a wooden stud. But the nail shot through the plywood and stud, striking the victim.

How to Remove a Nail from a Wooden Wall. A nail in a wall is a bit more difficult but not impossible. Here, you must be careful because when you remove it, pieces of wall may be destroyed if the nail was hammered in deeply. Given that the hammer is harder than the nail, by re-adjusting the angle at which you're pulling, the nail can bend and ...

### **How to Remove Large Nails From Wood - Tools Critic**

It's basically a vibrator that slowly drives the nail into the wood. I tried it on a big galvanized spike, and it went in effortlessly. However, you'll be faster using a decent claw hammer and a full swing. This seems to fit the bill perfectly for working in places where you can't get the backswing.
